1. Why We Made Our Software?

Our initial customer was frustrated by a university organization that had issues finding files. To solve this problem they suggested a search engine for documents.

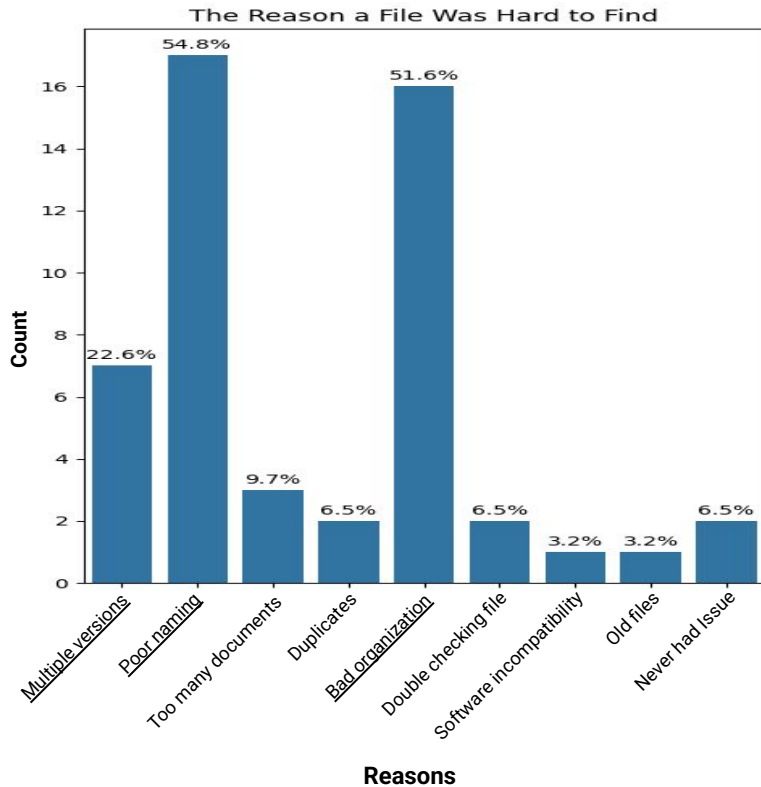

Before we made a program we wanted to know:

- Why do people struggle to find files they are looking for?

1. Why We Made Our Software?

93% of people surveyed reported that they struggle to find files, because of:

1. Poor naming
2. Misplace/Bad organizing system
3. Multiple versions

1. Why We Made Our Software?

! Problem

People struggle to find files they are looking for; this is not solved by title based searches

Solution

Intelligent searching based on the content of the file, not simply based on the title

2. What our Software Does

DOCUMENT MUNCHER

1. Semantic Search

- Users can search based on content, not based on the title of the file

2. Privacy

- Data stays on the user's computer

3. AI-Summary

- Don't open the file, just read the summary

4. Workspaces

- Users can select which files they are searching through

3. Demonstration

4. How our Search works

1. User makes a search.
2. The system picks out the keywords from your search query.
3. For each document in your workspace, the system calculates the following:
 - a. A score of on average, how important are the keywords are to the document.
 - b. A score of how similar your search query is to the summary of the document
 - c. The system then takes a weighted average of the score as the final score.
4. Documents are then presented as search results in descending order of their scores.

5. Recap and Future Plans

Jan 1st

Semantic Search

Users can complete a semantic search

Improve the accuracy

Privacy

Users are informed about how their data is protects

User are notified about data privacy anytime they share information

AI-Summary

Users can see an AI summary of documents

Fine-tuning accuracy

Release v1

Workspace

Users can Create/edit/delete workspaces
